

Truck Traffic in Ranson, WV

ROCKWOOL relies on transportation from trucks to both deliver raw materials to the factory and for delivery of final products to distributors and retailers. Factory traffic will primarily occur Monday through Friday and we will work with local transportation officials to ensure as little truck traffic as possible during peak travel hours. Volume will vary, but we estimate an average of 100 trucks per day. Total traffic, including employee vehicles, is expected to result in a two percent increase from current existing traffic on WV-9.

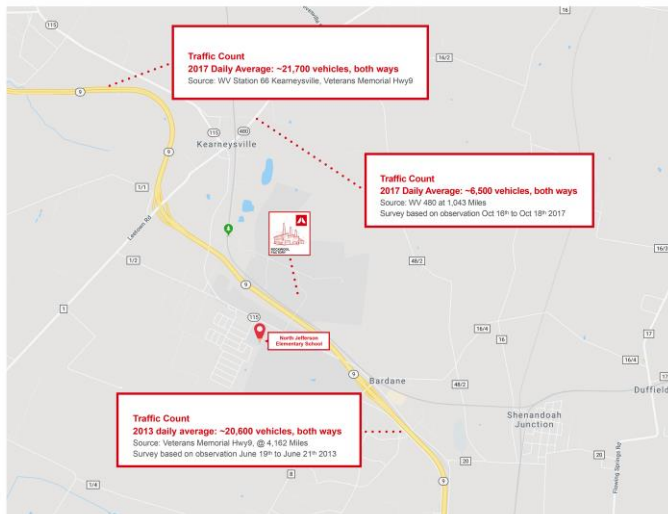

Our goal is to ensure the most direct access between the highway and the factory to reduce the impact on local traffic, particularly in relation to schools. From the Ranson site, trucks will leave Northport Avenue, turn left on old Route 9, going the opposite direction of North Jefferson Elementary School, and access the highway at Wiltshire (shown in the second visual).

Traffic Information from West Virginia Department of Transportation
